

Q: How long does it take for the middle ear to clear up after OME diagnosis?

A: It usually takes 3-6 weeks for the middle ear to clear up after OME diagnosis.

Q: Can OME cause hearing loss? If so, how long does it last?

A: Yes, OME can cause hearing loss. It usually lasts for 3-6 weeks.

Q: What are the symptoms of OME? How can I tell if my child has OME?

A: The symptoms of OME include ear pain, ear fullness, and hearing loss. You can tell if your child has OME by observing their behavior, such as ear tugging or decreased hearing.

Q: How is OME treated? What are the options for OME treatment?

A: OME is usually treated with observation. If it persists for more than 3 months, treatment options include **OT TABLE** or **stable** ear tubes. The **OT TABLE** is a table of otitis media with effusion (OME) treatment options. The **stable** ear tubes are a type of ear tube that is designed to stay in place for a long time.

Q: How long does it take for OME to clear up after treatment?

A: It usually takes 3-6 weeks for OME to clear up after treatment. However, it may take longer if the OME is severe or if the child has a history of OME.
